SUMMARY

Full-stack Software Engineer with 1.5 years of experience building production travel booking web applications. Works across the stack: React, Next.js and TypeScript on the client, and Node.js API modules on the server that call upstream REST services, map supplier payloads and handle auth, timeouts and errors. Experience spans the hotel, flight, holiday, insurance and activities verticals, covering search, results, property details, booking forms, fare breakdowns and checkout, in both a mature Next.js 12 / React 18 JavaScript application and a modern Next.js 15 / React 19 TypeScript monorepo with unit and DOM test coverage.

TECHNICAL SKILLS

Languages: JavaScript (ES2022), TypeScript, HTML5, CSS3

Frontend: React 18/19, Next.js 12-15, Tailwind CSS, Material UI, Bootstrap, CSS Modules

Backend and Data: Node.js, Express.js, REST API design and integration, MongoDB, SQL

Testing: Vitest, React Testing Library, Playwright

Tools and Platforms: Git, Bitbucket, Jira, pnpm, Turborepo, Docker, Google Maps Platform, SonarQube

Practices: REST API integration, responsive and mobile-first UI, CSS Modules and design tokens, code review, Agile / Scrum

PROFESSIONAL EXPERIENCE

Software Engineer — Vernost Tech Ventures Pvt. Ltd., Mumbai, India
June 2025 – Present

- Delivered 1,000+ merged commits across four production repositories, adding over 60,000 lines across approximately 2,300 file changes.
- Wrote the server-side API modules behind the booking screens in Node.js and TypeScript, covering upstream REST calls, supplier payload mapping, per-route authentication, request timeouts and error handling, each with its own tests.
- Built the hotel search map view and the property nearby-places panel on the Google Maps JavaScript API, including a viewport-bounds utility covered by unit and DOM tests.
- Developed the hotel booking page: guest and contact forms with validation, cancellation policy banner and timeline, and the pay-at-hotel price breakdown.
- Maintained and extended shared fare and price-breakdown components reused across the hotel, flight, holiday and insurance verticals.
- Integrated checkout mechanics including payment gateway charge handling, coupon validation, price recheck before payment and booking status polling.
- Built corporate travel policy compliance screens with dynamic in-policy and out-of-policy evaluation, multi-level approver binding, and an email approve and discard flow.
- Built the My Trips booking history page and the account profile section spanning all travel verticals.
- Improved perceived image load time on hotel search results by removing a hard-coded one second placeholder delay and making the behaviour configurable per caller.
- Worked in a TypeScript monorepo (Next.js 15, React 19, pnpm, Turborepo), writing typed view models with Vitest and Testing Library coverage alongside each feature.
- Performed root cause analysis on production defects across UI, API integration and data flow, and verified fixes through functional and regression testing.

EDUCATION

Bachelor of Engineering, Computer Science — August 2020 to January 2024
Rajgad Dnyanpeeth’s Shri Chhatrapati Shivajiraje College of Engineering, Bhor, Pune
Affiliated to Savitribai Phule Pune University (SPPU)
